Thermostatic expansion valve

Type TD1 / TDE1

TD1 / TDE 1 is a thermostatic expansion valve designed to regulate liquid injection into evaporators with smaller capacities in refrigeration, heat pump and air conditioning systems. The liquid injection depends on the refrigerant superheat at the evaporator outlet, where the bulb must be placed.

TD1 / TDE 1 is constructed for soldering into hermetic sealed systems and supplied as angleway and straightway version. The product range includes different orifice and connection sizes.

TD1 / TDE 1 can be supplied with and without external equalization, with and without MOP and is only available in industrial pack.

Features

- Refrigerants: R134a, R22, R404A, R407C and R290.
- Rated capacities from 0.42 to 3.88 kW (0.12 to 1.11 TR) for R134a
- Patented double contact bulb
- Good temperature transfer from pipe to bulb
- Fast and easy to install
- Supplied with fixed superheat setting as well as adjustable straightway version as tool for setting identification.
- Supplied with fixed superheat setting as well as adjustable straightway version as tool for setting identification.

Design and function

- 1. Thermostatic element (diaphragm)
- 2. Fixed orifice assembly
- 3. Locked setting screw
- 4. Bulb with capillary tube
- 5. Static superheat adjustment
- 6. Strainer

The thermostatic element of the valve has a combination of diaphragm area and charge that in connection with a minimum hysteresis provide the best possible regulation characteristics.
